Assignment 3

For Assignment 3, I chose Bun Bun Bake Shop to design a website for. I made 5 pages in total:

- Home Page
- Product Listing Page
- Filtered Product Listing Page (For Fruity Buns)
- Product Description Page (For Original Vegan Bun)
- Product Description Page (For Birthday Cake Bun)

Challenges

During this assignment, my most obvious challenge was to learn how to write in html and css. The learning curve slowed me down. There were many times I redid some features because the first time I did them, it didn't yield the results that I wanted to see.

The biggest challenge I faced was to choose which structures to use for some parts of the code. The top bar where the logo is aligned to the left and the button and the icon is aligned to the right was challenging to make. I tried to put margins between the items. However, in the end I decided to use Flexbox to align the items.

I also used Flexbox to align the product listing page. It made the process smoother because the first time I tried to do it, I had displayed images inline. The display didn't work as I intended to so I used Flexbox.

Design Choices

Because the name of the brand is Bun Bun Bake Shop, I wanted to have a design that reflects the simplicity and cuteness of an artisan cinnamon bun bakery. I thought that a shop that focuses on creating great cinnamon buns would prioritize showcasing their products over having complicated UI. So I went with a pastel color scheme with very simple interactions. I started with creating the logo and while creating the logo, I experimented with different pastels that worked together well. The end result was the soft orange and pink colors. I again went the font Open Sans because it's easily readable and simple.

I first did the rough prototype in Balsamiq where I decided on the layout and then the high fidelity prototypes were done in Sketch.

Pictures

During the project I used the photos that I found online with creative commons licenses. The links of each photo is listed below.
